# US Human Radiation Experiments Covered Up by Public Broadcasting

By **William Boardman**

*"The bomb will not start a chain reaction in the water, converting it all to gas and letting all the ships on all the oceans drop down to the bottom. It will not blow out the bottom of the sea and let all the water run down the hole. It will not destroy gravity. I am not an atomic playboy."*  
**-Vice Admiral William P. Blandy, Bikini bomb test commander, July 25, 1946**

January 11, 2014 "Information Clearing House - "RSN" - When the military scientists of an advanced technological nation deliberately explode their largest nuclear bomb (and 66 others) over Pacific islands and use the opportunities to study the effects of radiation on nearby native people, which group is best described as "savage"?

And what should you call the people who prevent a documentary about these American post-war crimes from reaching a wide audience

in the United States?

"Nuclear Savage" is a recent documentary film that explores American nuclear weapons testing in the Marshall Islands, 1946-1958, and particularly the secret Project 4.1: an American experiment in exposing Pacific Islanders to overdoses of radiation - deliberate human radiation poisoning - just to get better data on this method of maiming and killing people. The public broadcasting establishment has spent more than two years keeping this story off the air.

The preview reel of "Nuclear Savage" includes a clip with a stentorian newsreel announcer reporting on the American treatment of Marshall Islanders in April 1957, and explaining to his predominantly American audience:

"The Marshallese caught by fallout got 175 roentgens of radiation. These are fishing people, savages by our standards, so a cross-section was brought to Chicago for testing. The first was John, the mayor of Rongelap Atoll.... John, as we said, is a savage, but a happy, amenable savage."

So how serious is 175 roentgens (assuming the measurement is accurate)? In 1950, the International Commission on Radiological Protection (ICRP) recommended that human radiation contact should not exceed 0.3 roentgen per week for whole-body exposure ["roentgen" as a measure of radiation dose has since been replaced by "rem" (for "roentgen equivalent man")]. It's not clear how long the Marshallese were exposed to radiation levels of 175 roentgens - or on how many occasions - but that amount was more than 580 times what was then considered a safe weekly exposure.

## **Public broadcasting paid for this film - and is now suppressing it**

In 2005, director Adam Horowitz started work on "Nuclear Savage," his second documentary about the American military use and abuse of the Marshall Islands. Horowitz has a contract with Pacific Islanders in Communications (PIC), which describes itself as "a national non-profit media arts organization" whose mission "is to support, advance and develop programming that enhances public recognition of and appreciation for Pacific Islander history, culture, and society. In keeping with the mission, PIC provides funding for new programs primarily for public television. We work with independent producers to create and distribute programs about Pacific Islanders that bring new audiences to public television, advance issues and represent diverse voices and points of view not usually seen on public or commercial television."

Among its efforts to carry out this mission, PIC supported the production of "Nuclear Savage" with \$100,000 passed through to Horowitz from the Corporation for Public Broadcasting (CPB). Horowitz delivered a completed, 87-minute version of "Nuclear Savage" in October 2011 - the same month it was nominated for Best Environmental Film at the Amsterdam International Documentary Film Festival. That was also the same month various public broadcasting officials started putting up roadblocks to keep the movie

off the air, a delaying tactic that continues into 2014. FAIR (Fairness & Accuracy in Reporting) reported the story in detail as "Nuclear Stalemate" in Extra!

One of the first requests, from Leanne Ferrer at PIC, was for a shorter version at 60 minutes. Rather than have Horowitz cut his film by 27

minutes, PIC hired its own editor and controlled the editing process. Part of Ferrer's concern reportedly was a sort of politically correct reverse racism, her objection that there was too much of Horowitz in the film and he's not a Pacific Islander. The shorter version has less of Horowitz. And the PIC web site pitches "Nuclear Savage: The Islands of Secret Project 4.1" as a "portrait of Pacific Islanders struggling for dignity and survival after decades of intentional radiation poisoning by the U.S. government."

PIC summarizes the film this way: "Some use the term 'savage' to refer to people from primitive cultures, but nuclear experimentation pushed savagery to new levels. In the 1950s, the U.S. conducted 67 atomic and hydrogen bomb tests in the Marshall Islands, vaporizing islands and exposing entire populations to fallout. The islanders on Rongelap received near fatal doses of radiation from one test, and were then moved onto a highly contaminated island to serve as human guinea pigs for 30 years. Filmmaker Adam Jonas Horowitz spent 25 years collecting material - including original footage, archival clips, and unpublished secret documents - to create this unforgettable and ironic portrait of American cynicism, arrogance, and racism. Winner of festival awards in Paris, Chicago and Mexico City."

### **PBS canceled scheduled broadcasts without public explanation**

In 2013, PBS World Channel scheduled "Nuclear Savage" for four showings on May 28 and 29 - and PBS executive Tom Davison emailed Horowitz in advance, saying "Congratulations on this airing." When the airing failed to take place, without explanation from PBS, Horowitz was unable to get a straight answer from Davison, Ferrer, or anyone else in the public broadcasting food chain,

although PIC executive Amber McClure wrote with Orwellian deceit: "Your program has not been declined by PBS."

Outright rejection by PBS is required by Horowitz's contract in order for him to regain independent control of his film. In December 2013, in his original letter to the editor of the Santa Fe Reporter, Horowitz summed up his experience to date this way:

"PBS 'World Channel' executives accepted, scheduled and advertised the show nationally, only to reverse their decision and cancel the show at the last minute. The show was originally accepted and then later rejected by two different branches of PBS, on three different occasions. PBS executives promised to deliver to me, a list of the precise points in the film that they felt represented 'bias,' or questions of 'fact,' and I promised to work with them to fix any problems. But PBS has still never delivered any specifics whatsoever of their complaints about the film, a film by the way that they have already completely reworked with their own editors."

The project has also had support from private foundations, including the Kindle Project, where: "We support whistleblowers and rabble-rousers. We give grants to peacemakers and seed savers. We make awards to artists and activists. We support people and projects working towards solutions and alternatives to systems in transition. We seek out the strange, the bizarre, the unpolished, the less likely to receive funding. We fund individuals and initiatives that may seem risky or radical to mainstream funding sources...."

## **Public information is not always well known by the public**

The unsigned "Notes on Nuclear Savage: The Islands of Secret

Project 4.1" on the Kindle Project web site from April 2012 talks about the ways the film was succeeding, despite unofficial quasi-government censorship and beyond "the glamorous festival circuit":

"Heartbreaking is the most poignant word that could be used to describe this film, and in my conversations with Adam this word has been uttered more than once. I've often wondered how he has the stamina for this subject matter; the stamina to expose himself to the worst kinds of atrocities that humans inflict on one another. The people of the Marshall Islands have faced similar catastrophic fates as the victims who underwent Nazi medical tests during WWII. Adam was there to tell the world about it. These days, his perseverance comes from the success of the film - not just from the attention it's getting from the international circuit, but from what's happening in the Islands themselves."

What was happening in the islands was that "Nuclear Savage" was being shown again and again on local and national television channels. It was shown at the Pacific Island conference of Presidents. People were copying and bootlegging the film across the region, with bootleg copies sometimes turning up on television. And Marshallese activists were using the film to resist U.S. government efforts to re-settle some populations back to their home islands that were still dangerously radioactive.

"As of now, no one has moved back," Horowitz told an audience after showing "Nuclear Savage" at the International Uranium Film Festival in Window Rock, Arizona, last December. Despite the American effort to re-re-settle the forced Marshallese refugees on their former home islands, Horowitz said the effort had amounted to "just a bunch of empty houses "

just a bunch of empty houses.

Horowitz has been angry about American treatment of the Marshall Islands for a long time. In late 2013 he told a reporter the U.S. "destroyed an entire country that we were not at war with, that we were at peace with. Not only did they blow up all these islands, but they purposely contaminated all these people as human experiments. It's a very unknown story here."

The story was classified top secret until the 1990s, when the Clinton administration declassified documents related to nuclear testing that including previously unknown information on the Project 4.1 program to use Pacific Islanders as human guinea pigs for assessing the impact of ionizing radiation. Even the official historian of U.C. nuclear testing, Barton Hacker, who tries to minimize the criminality of Project 4.1, ended up writing in 1994 that an "unfortunate choice of terminology may help explain later charges that the AEC [Atomic

Energy Commission] had deliberately exposed the Marshallese to observe the effects. Like the American radium dial painters of the 1920s and the Japanese of Hiroshima and Nagasaki in 1945, the Marshallese of 1954 inadvertently were to provide otherwise unobtainable data on the human consequences of high radiation exposures."

**The U.S. was an occupying power, and effectively still is**

Europeans "discovered" these Pacific Islands in the 1520s (they were named the Marshall Islands after the British explorer John Marshall). In 1874 they became part of the Spanish East Indies. In 1884 Germany bought them as part of German New Guinea. During World War I, the Japanese occupied the islands and later ruled them under a

League of Nations mandate. During World War II, the United States took the islands from the Japanese and has effectively occupied them ever since.

In 1946, the U.S. evacuated the entire population of Bikini Atoll (167 people) and logged the first of 23 atomic weapons explosions that have made what's left of the atoll (part of it was vaporized) a largely uninhabitable radioactive tourist destination [one report says 4-6 "caretakers" live there]. Most of the 167 original residents have died, but their descendants number more than 4,000. A 1975 federal lawsuit (seeking roughly \$750 million in compensation promised but not paid by the U.S.) was denied review by the U.S. Supreme Court in April 2010, but the effort to make the U.S. provide just compensation continues.

Later in 2010, UNESCO named Bikini a "world heritage site" as a symbol of the "dawn of the nuclear age." The U.S. Environmental Protection Agency has said that Bikini is close to the "safe" radiation level of 15 millirems - but according to the U.S. Department of Energy, the "safe" level is really 100 millirems, and the contradiction remains unreconciled.

In 1947, the United Nations included the Marshall Islands in a Trust Territory controlled by the U.S., whose obligations included the duty to "protect the inhabitants against the loss of their lands and resources." Later in the year the U.S. evacuated the entire population of Enewetak Atoll, where it would explode another 44 atomic weapons, the last series in 1958.

On March 1, 1954, the U.S. exploded its first deliverable hydrogen bomb that, at 15 megatons, was more than 1,000 times as powerful as

the Hiroshima bomb of 1945. The official story, which the U.S. government still defends, is that it was an "accident" that the bomb dumped so much radiation on downwind populations, and that Project 4.1 was initiated after the blast in order to help the victims as well as study them.

The record includes one reference to Project 4.1 prior to March 1 [the government says someone put it there after the fact]. More troubling is the undisputed evidence that the U.S. was aware that the weather had changed, that the wind was blowing toward populated areas, but they went ahead with the test anyway. After the radiation came down like "snow" on Rongelap and other islands, the Navy evacuated

American personnel quickly, but left the "happy, amenable savages" to absorb more radiation for another two days.

As early as 1956, the Atomic Energy Commission had characterized the Marshall Islands as "by far the most contaminated place in the world."

### **For the victor, justice is only optional, not enforceable**

In 1979, the U.S. allowed the Marshall Islands to become "self-governing," while the U.S. reserved the sole control of military use and defense of the territory. In 1986 the U.S. granted the Republic of the Marshall Islands "sovereignty" under the Orwellian-named Compact of Free Association, which left the U.S. in military control and free to use Kwajalein Atoll as a missile testing range. Four years later the U.N. ended the "nation's" Trusteeship status. The CIA estimates that the Marshall Islands' GDP is \$182 million, of which the U.S. provides \$70 million in aid payments, according to the State

Department. Both the CIA and State Department omit unpaid compensation from their public summaries of the Marshall Islands.

"Nuclear Savage" includes U.S. Ambassador Greta Morris making a wooden public statement of "deep regrets" for the "hardships" the Marshallese have suffered "as a result of the testing program, as well as the accidental downwind injuries caused by one test, Bravo" - which is the official version of the 1954 H-bomb Castle Bravo. Later Greta Morris is asked at a public event to discuss U.S. "government policy" - the ambassador refuses to talk on camera.

In March 2012, at an event commemorating the anniversary of the H-bomb test, Marshall Islands foreign minister Phillip Muller called on the U.S. to pay more than \$2 billion in awards already made by the Nuclear Claims Tribunal, which was created and underwritten by the U.S. The U.S. moral and financial obligation continues to grow, as the Marshall Islands are reportedly seeing a continually rising cancer rate more than half a century later. At the same event, according to Overseas Territories Review:

"U.S. Ambassador to the Marshall Islands Martha Campbell told the event in Majuro Thursday evening that 'the United States has provided nearly \$600 million in compensation and assistance to the Republic of the Marshall Islands to help the affected communities overcome the effects of nuclear testing,' and noted that the U.S. and Marshall Islands governments had agreed to 'a full and final settlement of all nuclear-related claims' in 1983" [an apparent reference to the Compact of Free Association and its side agreements].

In 1998 staff from the U.S. Centers for Disease Control and

In 1978, staff from the U.S. Centers for Disease Control and Prevention (CDC) made a comparison study to compare the amount of radioactive Iodine-131 at four different radiation-polluted sites, measured in curies (1,000 curies of Cesium-137, as found in a radiation therapy machine, could produce serious health effects in a direct exposure of just a few minutes). The CDC team reported its finding that the atmospheric release of curies of Iodine-137 at the Hanford nuclear processing plant was 739,000 curies; at Chernobyl the release was 40 million curies; at the Nevada bomb test site, 150 million curies; and in the Marshall Islands, 6.3 billion curies (more than 30 times as much radiation as the other three sites combined).

The Republic of the Marshall Islands is ranked #5 in the world among countries with the highest health costs as a percentage of GDP - behind Liberia, Sierra Leone, Tuvalu, and the United States.

The history of the treatment of the radiation victims of the Marshall Islands is essentially a paradigm for the treatment of radiation victims everywhere. The perpetrators of radiation-exposure lose patience with the seemingly endless effects of their acts and so they tend to abandon all responsibility for them. So far at least, the Marshall Islands history appears to be foreshadowing Fukushima's future.

Given the unpalatability this story might have for an American television audience, it's little wonder that public broadcasting executives are content to spend public money to keep the public under-informed.

After-notes:

**"The Republic of the Marshall Islands covers nearly a million square miles of picturesque islands, thriving coral atolls, and crystal clear blue waters .... undoubtedly one of the most interesting places in the world to visit."**

-Marshall Islands government promotion for tourism in 2014

**"The term "savage" is used to refer to people from primitive cultures, but this documentary shows how savagery reaches new levels with the advent of advanced technology. In the 1950s, the U.S. conducted 67 nuclear tests in the Marshall Islands, vaporizing islands and exposing entire populations to fallout. The people of Rongelap received near fatal doses of radiation from one of these tests, and were then moved to a highly contaminated island to serve as guinea pigs to test the affects of radiation on humans for almost 30 years, where they suffered from recurring cancers and birth defects that have affected multiple generations. This cynical act by the U.S. government was conducted with such arrogant racism that without incredible archival footage and shocking secret documents, the story would seem unbelievable."**

-Film Society Lincoln Center, New York City, description of "Nuclear Savage: The Islands of Secret Project 4.1"

The U.S. avoiding the truth! What a surprise! The U.S. killing people, no surprise there. The U.S. experimenting on happy villagers. So what's new? Haven't you heard of Hiroshima?

The U.S. is where the lowest forms of humanity live and breed!

No, the Us always avoids the truth. Starting with plague infested blankets in the REvolutionary War, to blacks with syphilis in the south, to Serratia marcescens in San Francisco...and who know how many other incidences including the Atomic Vets in Nevada...our government see no wrong is using civilians or service men as experimental animals. I have a friend who is one of the 3 remaining Atomic Vets so damaged by radiation from Yucca Flats (?) in Nevada post WWII, his legs have such lymphedema they are 4 times the size of normal men's legs and painful..very painful for years he's had this. Our government has a remarkable lack of compassion. PBS is not longer free to report as it will....it is owned lock, stock and barrel by the US Gov and Koch Bros.

I do not recall seeing any mention of US ships with crewman on deck, watching the bomb blast; nice front seat view; lot of radiation exposure; sure that they were part of the test.

Lot with no shirts, or wearing shorts as I recall.. Doubt shirt or long pants would provide much protection.

I remember still pictures and film on this. May even have copy somewhere.

Here in Hawai'i, we have an influx of Marshall Islanders and Micronesians, a steady an increasing flow of immigrants because of "Compact of Free Association" agreements. They are coming here because they can instantly qualify for much needed medical benefits, subsidized housing, and welfare stipends. Unfortunately, they comprise a large percentage of the novertv class which also include

comprise a large percentage of the poverty class which also include large number of Filipino, Chinese, and Vietnamese immigrants.

We are now a two-class colony of empire. The poor - immigrants and now a lot of the former middle class locals. The rich - mostly domestic and international immigrants of the extremely rich class. Overall, we are becoming a large scale version of Easter Island (Rapa Nui) as overpopulation, overdevelopment, and resource depletion hits us concurrently. A most interesting story is unfolding here, one that may provide insight for the entire empire.

All human beings everywhere need to recognize that their own people are every bit as evil and as good as any other group of people. Thinking that Nazis or Stalin or Al Qaeda, somehow were "bad guys" and that other people are "good guys" is just pure nonsense. People are not more evil or good because of living in a given place or time or speaking a certain language or having a particular skin, eye, or hair color or religion. The right conditions create terrorists anywhere and everywhere including in the US govt, military, and spy agencies.

Protective clothing...? I was wondering about the people at Fukushima too....those little white plastic looking jump suits.....does that help anything, except give the illusion that all those guys are wearing the same little white uniform-----so it must be safe?

It would seem that after the first test that there would be a lot of information. That after Hiroshima and Nagasaki , there would be even more.....so they had to do this again in the 1950s to the islanders?

O well, here comes radiation to all on the west coast , sealed with an ironic kiss-from Japan. Maybe it's Japans' way of serving some hari kari to the world.....because in a wav. the militaries of all seem to

Just another case of how little importance the US attaches to people from outside of their country. They have even begun treating Americans the same, unless of course they are rich and very important. When I was a small child, I used to dream about going to the US, then I awoke, and realised it was, and still is a nightmare.

See; "NPR Chairman Kevin Klose Was Director of All CIA Propaganda Broadcasts" , "Kevin Klose, NPR Head & CIA Creep" , "NPR, America;s Daily Propaganda Grist Mill". People think they're superior to FOX viewers by sourcing the NY.Times & PBS when they're probably the most deluded absorbing the same FOX lies concerning U.S.imperialism but thinking they're "alternative" when spoken in a soft FM voice with soft background music.

Everyone who uses a cell phone is being exposed to high levels of radiation. Studies are linking tumors with cell phones. The radiation experiment goes far beyond nuclear testing sites, as we all are considered guinea pigs.

I hear ya. It sounds crazy. I don't want to believe it. But I don't think he's saying radiation is harmless. A massive exposure in a short period of time does a lot of damage and may kill you. I think what he's getting at is it's not as bad as we've been led to believe. I find it difficult to swallow, but I'm to the point where I don't know what to believe. It seems the crazier the idea, the more plausible it is. I should maybe check myself into a mental institution.

Makes one wonder about US claim that it's nuclear subs, USS Scorpion and USS Thresher, which sit at the bottom of the Atlantic, are not emitting serious levels of radiation.

But, since they're at the bottom of the Atlantic who's going to contest that? No instead, we are hearded - thanx to a Robert Ballard - into devoting our attention to the Titanic.

Just another sad story of pain and suffering inflicted on these people by the United States government. The worst part is the fact that American government refuses to pay any compensation for what they did. This should be a wake up call to every American of what the government is capable of doing to anyone including American citizens. Another word, the American government does not give a rat's \_\_\_ about the American people.
